Crisis and Change in the Venetian Economy in the Sixteenth and Seventeenth Centuries Brian Pullan, 2013-11-05 The decline of Venice remains one of the classic episodes in the economic development of modern Europe. Its contrasts are familiar enough: the wealthiest commercial power in fifteenth-century Europe, the strongest western colonial power in the eastern Mediterranean, found its principal fame three centuries later in carnival and the arts. This metamorphosis from commercial hegemony to fashionable pleasure and landed wealth was, however, a complex process. It resulted not so much from the Portuguese voyages of discovery at the beginning of the sixteenth century as from increasing Dutch and English competition at its end, and from industrial competition chiefly from beyond the Mediterranean. Several of the Articles Dr Pullan has chosen to illustrate these changes are made available in English for the first time, and two have been revised for this book. Four deal with the fortunes of entrepot trade and shipbuilding, which had furnished the basis of Venetian wealth and influence in the Middle Ages; four others examine the new fields of enterprise which Venice explored in the sixteenth and seventeenth centuries and which helped to compensate for the decline in traditional activities. This classic book was first published in 1968.

Medical Data Analysis Jose Crespo, Victor Maojo, Fernando Martin, 2003-08-06 The 2nd International Symposium on Medical Data Analysis (ISMDA 2001) was the continuation of the successful ISMDA 2000, a conference held in Frankfurt, Germany, in September 2000. The ISMDA conferences were conceived to integrate interdisciplinary research from scientific fields such as statistics, signal processing, medical informatics, data mining, and biometrics for biomedical data analysis. A number of academic and professional people from those fields, including computer scientists, statisticians, physicians, engineers, and others, realized that new approaches were needed to apply successfully all the traditional techniques, methods, and tools of data analysis to medicine. ISMDA 2001, as its predecessor, aimed to provide an international forum for sharing and exchanging original research ideas and practical development experiences. This year we broadened the scope of the conference, to include methods for image analysis and bioinformatics. Both are exciting scientific research fields and it was clear to the scientific committee that they had to be included in the areas of interest. Medicine has been one of the most difficult application areas for computing. The number and importance of the different issues involved suggests why many data analysis researchers find the medical domain such a challenging field. New interactive approaches are needed to solve these problems.

Artificial Intelligence and Knowledge Engineering Applications: A Bioinspired Approach José Mira, José R. Álvarez, 2005-06-09 The two-volume set LNCS 3561 and LNCS 3562 constitute the refereed proceedings of the First International Work-Conference on the Interplay between Natural and Artificial Computation, IWINAC 2005, held in Las Palmas, Canary Islands, Spain in June 2005. The 118 revised papers presented are thematically divided into two volumes; the first includes all the contributions mainly related with the methodological, conceptual, formal, and experimental developments in the fields of Neurophysiology and cognitive science. The second volume collects the papers related with bioinspired programming strategies and all the contributions related with the computational solutions to engineering problems in different application domains.
